Old Paint Remover No. 281 for Graffiti, Marks and Adhesive Coats

APPLICATION: designed to remove thin hard-to-destruct paint coatings following a sprinkling or dipping method. The composition eliminates graffiti, marks and adhesive coats left by scotch or advertising posters from painted limestone and terrazite plaster, painted and unpainted brick laying, metal structures, folding shutters, granite, marble, limestone, concrete, etc.

Special features: Remover No. 281 is a mixture of semi-volatile organic solvents. It is a liquid (not jellylike) solution which penetrates immediately into the paint structure and destroys it. Being free of acids and alkalis (pH-neutral), it does not provoke corrosion. Old Paint Remover No. 281 does not contain any additives (thickeners, SAS, etc.), it consists of active solvents only, which allows it not to leave any traces after it dries out completely.

RESTRICTIONS: Temperatures below +5°C compromise significantly removal efficiency and increase exposure time. Do not apply the remover to a wet surface. Avoid contact with plastic items (glass units, doors or door studs), electrical insulation, construction PVC fittings and rubber goods. Keep away from fire! Keep out of reach of children!

APPLICATION: Apply Old Paint Remover No. 281 to graffiti, marks (try to follow ornament edges) or adhesive coats with a brush, a wag or a spray diffuser from bottom to top and expose for several minutes. As an alternative, you may dip the parts to be treated into the working solution. During the operation mind a time factor, i.e. the period from application of Old Paint Remover No. 281 till removal of dissolved graffiti or adhesive coats. Insufficient curing dissolves old coating only partially, while excessive exposure leads to evaporation of solvent and deeper penetration of graffiti or glue into the surface.

Remove dissolved (disrupted) graffiti layer with a rag, a brush or an applicator from bottom to top or from edges to center. Several removal procedures with increased exposure time may be required to remove thick (multilayer) graffiti and marks. Cover the treated surface with a textile compress saturated with the remover and place a stretch film over it to enhance efficiency of the product. You may use high-pressure vessels to remove dissolved (destroyed) paint from very porous surfaces (if applicable) with a radial water jet. These recommendations apply fully to the adhesive coats left by scotch or advertising posters.

Caution! Volatile components that evolve during application have a moderate irritating effect on conjunctiva and upper respiratory airways and a light narcotic action. Wear overalls, rubber gloves and safety goggles when working with the product. In case of contact with eyes or skin, rinse immediately with plenty of running water. Store and transport the product in tightly closed containers at -20°C to +30°C. Do not mix with other agents. The manufacturer ensures that the product complies with the specifications provided that the transportation, storage and application requirements set out in the manual are observed.
